# We Have Reached The Stars

## 1- Summary of Our Project

To carry out studies to solve the problems of the students who continue their education about generation conflict and society.

The students who continue their education may not always be in line with their other peers, with their own developmental characteristics and the characteristic features acquired from their immediate and distant environment. In this process, students may enter into incompatibility with the environment and a further generational conflict. Although this is considered a transitional process, it can sometimes cause advanced problems in young people. With our project, studies will be carried out to ensure that our students who have such transition problems get through this process in the most harmless way..

## 2- Purpose of Our Project

Our project called Reaching the Stars is to contribute to the active citizenship of the students through project activities related to the active citizenship of the European Union in general and the responsibilities and duties of our young people in preparing for life..

## 3- Our Project Goals

- Investigating the causes of intergenerational conflict
- Preparing a movie about youth issues
- Increasing foreign language proficiency
